

FIG. 46.—Consolidation about the division of a ductus alveolaris into its atria at about the termination of the ductus. Surrounding alveoli and air sacs filled with a purulent exudate. A small amount of columnar epithelium is seen at one end of the opening of the ductus. Some hemorrhage into the alveoli in the outer portions. The walls of the blood vessels are markedly thickened. Accession number 2694, Army Medical Museum. Negative number 46026. Hematoxylin and eosin stain; $\times 98$
